5 Post-Test Questions

Instruction Script

The following script is read aloud to each participant at the beginning of the testing session.

"Thank you for taking the time to help me test this app. My name is Shinayd, and I am developing a mobile application called Game Guardian. It is a parental monitoring app designed to help parents keep track of their children's activity on Roblox."

"Today I am going to ask you to complete a few tasks using the app. As you work through each task, I would like you to think out loud. That means telling me what you are looking at, what you are thinking, what you expect to happen, and anything that confuses you or feels unclear. There are no wrong answers and no wrong actions. I am testing the app, not you. If something is confusing, that is valuable feedback for me."

"I will not be helping you during the tasks. If you get stuck, do your best to figure it out, and let me know what you are thinking as you try. I may ask follow-up questions at the end." "This session will take about 10 to 15 minutes."

I will be recording the screen and audio so I can review your feedback later.

Your participation is completely voluntary, and you can stop at any time."

"Do you have any questions before we begin?"

Preliminary Questions

Before starting the tasks, the following questions are asked to understand the participant's background:

1. Are you a parent or guardian of a child who plays video games?
2. Are you familiar with Roblox or any other online gaming platforms?
3. Have you ever used a parental monitoring app before? If so, which one?
4. How comfortable are you with using mobile apps on a scale of 1 to 5?

Tasks Being Tested

The following five tasks are designed to test the key features of Game Guardian. Each task targets a specific user goal that a parent would need to accomplish in the app.

Task #	Task Description	Feature Tested
1	Log in to the app using provided demo credentials	Authentication
2	Find out which game your child played most recently	Dashboard & Activity
3	Locate and read a high priority alert and resolve it	Alerts & Alert Details
4	Check if your child has joined any risky or suspicious groups	Activity Groups tab
5	Turn off push notifications in the app settings	Settings

Scenarios

Each task is presented to the participant as a real-world scenario. The scenario provides context so the participants understand why they would perform this action.

Task 1: Log In to the App

Scenario: You just downloaded Game Guardian on your phone. You already created an account during setup. Open the app and log in using these credentials: Email: demo@gameguardian.com, Password: demo1234

Success Criteria: The participant successfully logs in and reaches the main dashboard.

Task 2: Find Your Child's Recent Gaming Activity

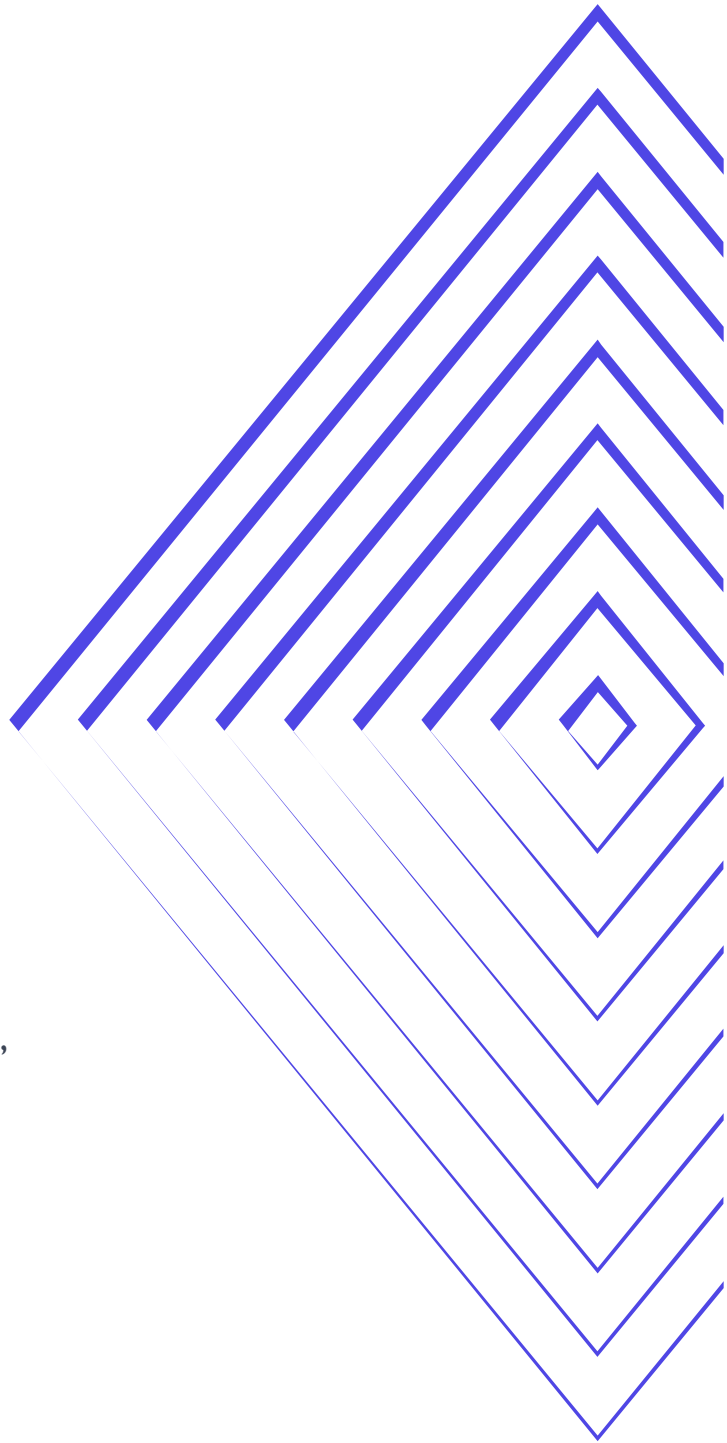

Scenario: It is after bedtime and you want to check what your child was playing today. Find out which game they played most recently and how long they played.

Success Criteria: The participant navigates to the Activity screen, views the Games tab, and identifies a game name and its playtime.

Task 3: Read and Resolve a High Priority Alert

Scenario: You received a notification that something needs your attention regarding your child's gaming activity. Find the high priority alert, read the details and recommendations, and then mark it as resolved.

Success Criteria: The participant finds the alert (via the dashboard banner or Alerts screen), opens the detail view, reads the information, and taps Mark as Resolved.

Task 4: Check for Risky Groups

Scenario: You read an article about online scams targeting children through gaming groups. You want to check if your child has joined any suspicious groups on Roblox.

Find

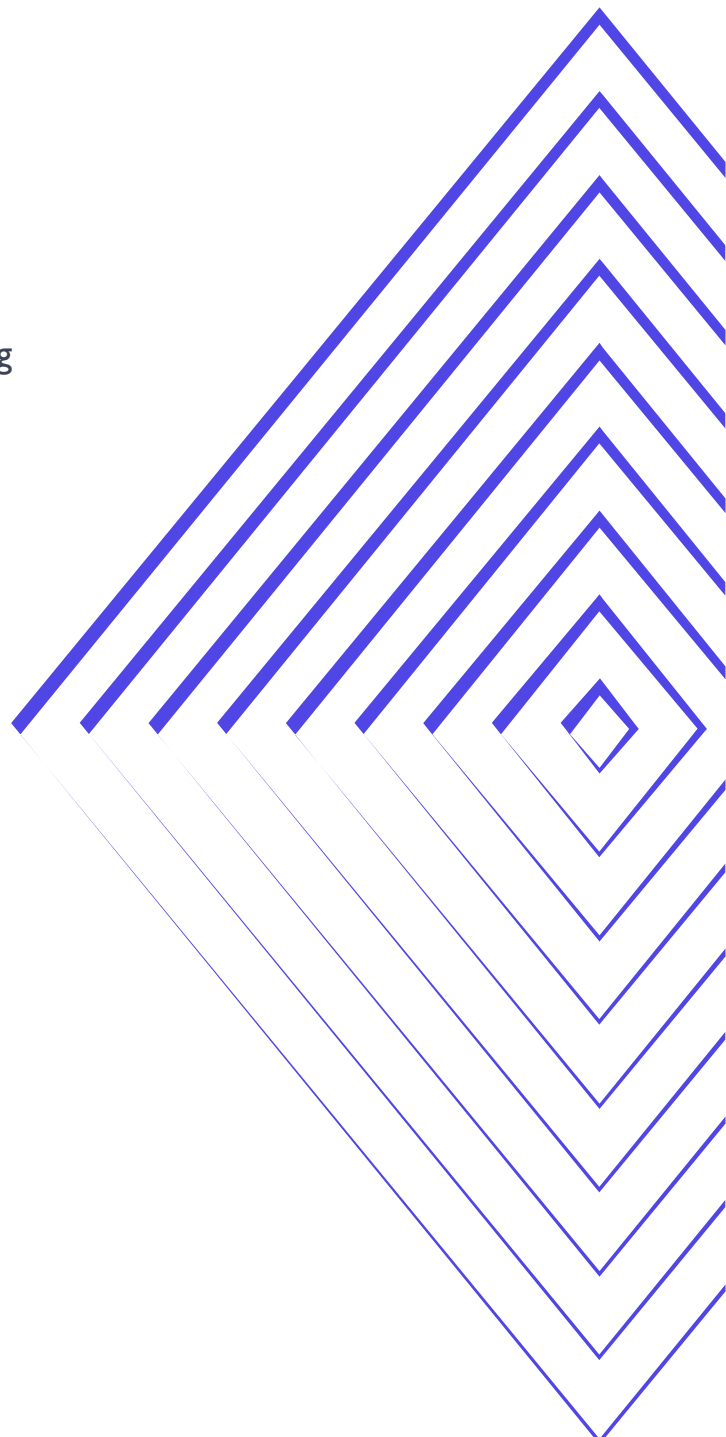

the groups your child is in and identify any that are flagged as risky.

Success Criteria: The participant navigates to the Activity screen, switches to the Groups tab, and identifies the group marked as risky with flagged keywords.

Task 5: Turn Off Push Notifications

Scenario: You are going into a meeting and do not want to receive alerts from Game Guardian for the next hour. Find the setting to turn off push notifications.

Success Criteria: The participant navigates to Settings and toggles the Push Notifications switch off.

Post-Test Questions

After the participant completes all tasks, the following questions are asked:

- 1** Overall, how easy or difficult was the app to use?
- 2** Was there anything that confused you or felt unclear?
- 3** What did you like most about the app?
- 4** What would you change or improve?
- 5** Would you use an app like this to monitor your child's gaming? Why or why not?

"Thank you for your time and feedback. Your input will help me improve Game Guardian and make it a better experience for parents. I appreciate your participation."
